

Call for abstracts

EGU session General Assembly 2017

Sustainable management of river deltas under pressure

Dear colleague,

We invite you to submit an abstract to the EGU session 'Sustainable management of river deltas under pressure', which will be held at the EGU General Assembly 2017, 23-28 April 2017, Vienna, Austria (<http://www.egu2017.eu/>).

The aim of this session is to bring together knowledge of both natural and societal processes acting in a delta, and their impacts, which is essential to find sustainable solutions for delta management. We invite contributions to this session on (1) human-induced processes driving change in river deltas, (2) impacts of these changing conditions, and (3) optimizing delta management solutions.

For a full session description and submission see <http://meetingorganizer.copernicus.org/EGU2017/session/24187>. We plan to publish the contributions to this session in a special issue in the Anthropocene journal.

This session is organized by Future Deltas, a research focus area of Utrecht University (www.uu.nl/futuredeltas), in collaboration with the Woods Hole Oceanographic Institution (USA) and the University of Southampton (UK).

All the best,

Conveners of this session:

Esther Stouthamer (Utrecht University)

Hans Middelkoop (Utrecht University)

Liviu Giosan (Woods Hole Oceanographic Institution)

Robert Nicholls (University of Southampton)
